New Competition

These series competition floats are developed by our team competitors to help you for excellent results. These floats are made from top quality materials, first quality balsa wood, special developed water-resistance paints for floats with low friction in water

A range of floats where the line goes through the middle. They provide perfect control because the line leaves the body just where it meets the bristle. This system ensures the body of the float doesn't get damaged during the fight.

New Competition

Floats with the line through the body 15

15 - 10

In line drop-shaped float. This very strong float has a carbon stem and a hollow plastic high-visibility antenna. Ideal for carp fishing..
